Navvy+ Formative Essentials for Leaders: Pacific- **FAQ**

10.14.26

Question	Response
I think I remember that the practice checks can be done outside of school- at home for example. Is that correct?	Yes, practice checks are very flexible. You may assign practice checks for homework or allow students to attempt them outside of school hours.
Can the practice checks can be created for more than one standard at a time?	Yes, practice checks are very flexible and allow for multiple standards to be included in a single practice check.
When it says during the school day, is that set up for local time? Or is it all East Coast time?	The school day is considered to be 7am to 4pm for the time zone in which you reside.
If multiple teachers want to use the same questions for a practice check, they would each have to build the practice check, correct? Or can it be created by one and shared?	For a Build Your Own Practice Check, each teacher would create their own check. Teachers independently configure their own checks. Administrators may create checks for multiple classes.
Administrator, meaning STC or school leader? Can anyone else be assigned as an administrator for that purpose?	School leaders or those who have access to multiple classes within the system may assign to multiple classes.
Do the smartsets adapt to the student's work- meaning as they are working in the set?	The smartsets are developed based on the student's performance on the competency check. They are not computer adaptive - so they are not adapting to the student's work. They are instead personalized to the needs of the student.
So, as a someone with district level access, I could assign an assessment to multiple classes at multiple schools. And I could work with teachers acreoss the district to develop an assessment that they would all administer?	Yes, a district administrator may assign a competency check for a grade level at the district level.
Are teachers able to see the smart set results like a practice Check?	SmartSets are ultimately another type of practice check. SmartSet results are available to teachers through the existing Navvy+ practice reports, similar to Practice Check results. For example, teachers can review SmartSet performance through Student Progress or Roster by Standard by filtering the Check Type to Practice.
I do not see the Smart Set option on my home screen.	SmartSets are configured at the teacher level. If you filter down to the teacher access in the demo account, you'll see the option to manage your SmartSets from the home screen.

are smart sets only visible to the teacher view? Can the district veiw see the smart sets?	SmartSets are only visible from the teacher view. Because SmartSets are "continuous" or "always on" and personalized, they are not set at an administrative level.
Do teachers have a student dashboard where they are able to see all checks, sets, etc. assigned to a student and see their performance?	Yes. Teachers may view individual student results through the Student Progress report, which shows a student's progress toward competency for each standard. Teachers may also view their students' results and reports by student or aggregated by class. Assigned checks are managed separately, so I wouldn't describe it as one single dashboard that shows every assignment and every performance measure in one place.
A single dashboard would be a nice feature as well as if the dashboard could provide recommendations for additional tasks (AI integration).	That's great feedback. A consolidated student dashboard that brings assignments and performance together, along with recommendations for additional practice or next steps, could be a helpful enhancement. We can capture that as a feature suggestion for the Navvy+ team.
My understanding is Smart Sets are triggered when comptency checks are given. Do Smart sets only provide practice for the competency check standards already assessed? Are you better off giving a mixed competency check?	SmartSets are not "smart" until a competency check has been given. If SmartSets are turned on, then the system will assign a student an "Explore SmartSet" if the student does not have any competency check data. Once the student has competency check data, the Smartset can now assign a "develop" or "strengthen" Smartset based on the student's performance on that competency check. So, I would definitely wait to assign SmartSets until you have Competency Check data.
DoWEA Question - on our DoWEA assessment calendar it says "short cycle formative assessments" Can you define what they are?	Short-cycle formative assessments are brief, standards-focused assessments used during instruction to check students' understanding and inform next instructional steps. For DoWEA, the term refers to Navvy+ Formative Checks, which provide standards-level information to help educators determine which students have demonstrated competency and which may need additional instructional support.
Is there a way to aggregate competency check data across multiple classes and get component summaries in an aggregated list?	There is a report called the Component Accuracy Report that provides you with the component level data for students across one class or multiple classes.
I was able to find the option for a single teacher but can that span multiple teachers with multiple classes.	Yes, an administrator has the access to view multiple classes. If you are logged in with administrative access, in the filter section of the Component Accuracy Report, you would select the school, then the grade level standard set you would like to view, and the specific standard you would like to view. In the Class filter option, this is where you would select multiple classes to view.
Will NAVVY+ reference specific items in the learning library, or will teachers need to search by standard?	Navvy+ does not specifically recommend the items in the learning library, but it does allow you to utilize the student's report data to

	determine which standards or components need to be targeted for support. You may search the library by standard.
Where can I find the data for the seasonal screeners?	You should also have access to the Roster by Screener Report, which will provide you with the schools' results for the Seasonal Screener. That is covered in a different session, but you should have access to those reports within your Navvy+ account.
Those are standards aligned - are student able to see results of the screeners too?	Currently, students may only view their formative data / standards.
